STEM CELL INSTITUTE

# Kidney Disorder

# Overview

The kidneys -the two bean sized organs filter out wastes and fluid from your blood. When the kidneys cannot filter the blood the way they should, kidney diseases occur. Treatments like kidney transplants and dialysis are available. But, kidney transplants are often not a feasible option due to the non-availability of organ. Stem cell therapy for kidney failure, kidney problems, kidney stones, kidney cysts, and kidney injury.

People with high blood pressure and diabetes are at a higher risk of kidney disease. Each kidney contains about 1 million tiny filtering units called nephrons. Kidney disease is caused when these nephrons are scarred or injured. In high blood pressure, the blood vessels of kidneys, heart and brain is damaged. This is especially dangerous to your kidneys.

Kidney disorders may be “acute” or “chronic”. Acute kidney failure occurs when the kidneys suddenly lose the ability to eliminate excess salts, fluids, and waste materials from the blood.

The most common reasons of acute kidney failure are:

- Acute Tubular Necrosis (ATN)
- Severe or sudden dehydration
- Toxic kidney injury from poisons or certain medications
- Autoimmune kidney diseases, such as acute nephritic syndrome and interstitial nephritis
- Urinary tract obstruction

## Symptoms

Fatigue or weakness, a build-up of wastes or a shortage of the red blood cells (anemia) can cause these problems when the kidneys begin to fail.

Swelling of the feet, ankles, hands, or face — fluid the kidneys can't remove may stay in the tissues. Stem cell treatment for kidney disease in India is widely popular.

Ammonia breath or an ammonia or metal taste in the mouth, waste build-up in the body can cause bad breath, changes in taste, or an aversion to protein foods like meat. Itching along with waste build-up in the body can cause severe itching, especially of the legs.

Changes in urination, that means making more or less urine than usual, feeling pressure when urinating, changes in the color of urine, foamy or bubbly urine, or having to get up at night to urinate.

Back or flank pain, since the kidneys are located on either side of the spine in the back. Shortness of breath, kidney failure is sometimes confused with asthma or heart failure, because fluid can build up in the lungs. The stem cell treatment for kidney in Delhi helps cure the underlying problems efficiently.

Loss of appetite

Nausea and vomiting

## Cause

- Type 1 or type 2 diabetes
- High blood pressure
- Interstitial nephritis Polycystic kidney disease or other inherited kidney diseases
- Prolonged obstruction of the urinary tract
- Vesicoureteral
- Recurrent kidney infection or pyelonephritis

## Diagnosis

- KFT
- Ultra Sound
- Urine Test
- CBC

## Adverse Reaction

We comprehend that patients might have apprehensions about adverse reactions to the treatment. Possible side-effects of stem cell therapy may differ from individual to individual; any complications depend upon the type of processes you are undergoing.

Side-effects experienced by our patients are consistent with predictable reactions for routine IV and LP injections. The most common reactions to the treatment are fever, headache, diarrhea, leg pain, vomiting and allergic reactions. Less than four percent of patients experience any of these signs.

### **The most common reactions to the stem cell treatment are:**

Fever

Headache

Leg Pain

Diarrhea

Vomiting

Allergic reactions

**Vieze**  
STEM CELL INSTITUTE

# Treatment Procedure

The Viezec India offers a very safe and non-invasive treatment protocol and procedure. The patients can travel the next day. The following is the day-wise schedule for the patients.

## Day 1-

- Pick up from the Airport to the Hospital
- Interaction between Dr and Patient, to clear all their doubts at that time
- Admission procedure
- Clinical examination & Lab test will be done prescribed by the doctor

## Day 2-

- Stem cell Procedure
- Supportive therapies
- Physiotherapy

## Day 3-

- Supportive Therapy
- Physiotherapy
- Discharging formalities
- Drop back to the Airport

## International Patient Facilities

Quote/treatment plan  
Complimentary airport pick up  
Scheduling of all medical appointments  
Cost estimates for anticipated treatment

Visa assistance letter  
Dedicated guest relation officers  
Coordination of the admissions process

# Treatment

The majority of the cases of AMD involve the slow-developing type of AMD, called dry AMD. Currently, as of 2020, there are no treatment options available for dry AMD, but some promising new therapies are in it. The slow-developing form of AMD, called dry AMD, constitutes the majority of AMD cases. There are no treatment options currently available for dry AMD as of 2022, but some exciting new treatments are in the pipeline.

For all aspects of medicine today, including multiple cases of cancer, as well as for dry AMD, stem cell treatment is gaining momentum. The aim of stem cell treatment for AMD is to be able to replace retinal cells that have been damaged or killed by symptoms with new stem cells.

Stem cells are also inserted, through IV infusion, into the blood supply of the body. But, experts are focusing on how the stem cells can be transplanted directly into the eyes. One strategy involves placing the stem cells into a fluid suspension that can be injected under the retina

We use the unique technology of Mesenchymal stem cells extracted from Wharton's jelly (WJ) for treating MS. WJ-MSCs offer remunerative and budget friendly favorable treatment for tissue engineering purpose. An optic nerve stem cell regeneration aids this and more. They might help in the three peculiarly prominent ways – prevent damage, repair damage and develop new medicines.

The treatment will take place in multiple steps comprising of the following.

•**Qualification for the treatment:** Our experts will assess all your past medical history and symptoms to examine and correctly judge the severity of your condition. A series of tests will be performed to gain a knowledge of the stage of disease. As per the test results, our experts will counsel the patient for further process of the procedure.

•**Source Extraction:** With guidance and approval from the physician, the source of extraction will be decided. In general, WJ-MSCs are the most potent allogenic sources available. Stem cells from a healthy person (the donor) are transferred to the patient's body. A bone marrow donor is considered for allogenic stem cell transplantation. A scraping from the inside of the patient and his or her sibling's cheek is tested to determine tissue type. An expert will examine to identify Human Leukocyte Antigens (HLAs). If the HLA on the donor cells are identical or similar, the transplant is more likely to be successful. Stem cell for optic nerve atrophy is promoted to aid patients suffering from similar kind of ailment.

•**Laboratory Processing:** The extracted samples will be sent to government approved cGMP laboratory for processing. The sample manipulation will take place in a state-of-the-art facility in compliance with the ISO and GMP standards and using the latest technologies. The client will receive a third party certificate from an internationally accredited lab for quality purpose. An optic nerve stem cell therapy provides just that and more.

•**Stem Cell Implantation:** Once the stem cells are ready to be implanted, the doctor will identify the most potent method of infusion based on the patient's physical and mental well-being. The only limitation of the allogenic stem cell treatment is that this procedure carries the risk of developing Graft vs. host disease (GVHD), wherein the patient's body rejects the donor stem cells. Human leukocyte antigens (HLA) can help minimize the risk of any side effects. In this procedure, the HLA of the patient and the donor are primarily matched as closely as possible.

**Stem cell treatment Aftercare:** The patients will be asked to visit the doctors for evaluation. You will be provided counselling for speedy recovery and also kept on check to ensure that no side effects affect the human body.

## Mechanism

Stem cells can help restore the weakened retina and can contribute to a complete halt in the process of loss of vision, thus enhancing the general quality of life of humans. The new doors to the cure and changes in Macular Degeneration patients have been opened through Stem Cell Therapy.

Program for Stem Cell Therapies to treat multiple diseases. Each patient receives 200-300 million stem cells during the stem cell procedure. Not only does the sum of stem cells compensate everyday losses, but it beats them by a million times. The stem cell source, which has basically been missing for the last 15 to 20 years, is thus retrieved and revived. Different organs get rejuvenated following our stem cell injection, and they get revived when the new and activated stem cells replace the old ones fully.

Introduced into the retrobulbar space, stem cells may start to work on damaged tissue and begin to rejuvenate the optic fibers and retinal cells. Photoreceptors and other cells can be differentiated from mesenchymal stem cells. It is possible to use segregated stem cells to treat tumors in the macular and retinal cells.

- ❑ • There are three stem cell classes that vary, based on their position in the body and their potency (the ability to develop in different cell lines). Ophthalmologist performs experiments on both of these classes. Embryonic stem cells (ESCs) are cells that are found at an early stage of development in the inner cell mass of an embryo. ESCs are pluripotent, meaning that in the course of growth they will become any cells.
- ❑ Fetal stem cells. Following an abortion or from cord blood, this community of cells is removed from the fetus. Fetal SCs have greater functionality than adult SCs and are pluripotent. Such cells exhibit increased recovery rates of photoreceptors and are capable of sustained doubling during cultivation. Their use, however, is often synonymous with ethical concerns. Study on fetal cells is banned by law in many countries worldwide.
- ❑ Adult stem cells, found in mature tissues, are immobile and non-specialized cells. Adult SCs collaborate with new ones to replace dead cells and facilitate tissue regeneration. Nonetheless, they create a microenvironment for tissues, shield them from degeneration (destruction), and also have the capacity to self-renew and create mature cells. Hematopoietic stem cells, mesenchymal stem cells, and neural stem cells may be differentiated by multiple forms of SCs.
- ❑ Relevant antigens, which are a common cause of incompatibility between donor tissues and the recipient during transplantation, are still not generated. ESCs may be useful in managing retina degenerative disorders, retinal pigment epithelium pathologies, and optical neuropathies. Research on ESCs is banned at the regulatory level in many countries, as their extraction from the embryo interrupts its further production.

# Patient Testimonials

## Mohit Rastogi (Bihar, India)

My dad had suffered from a kidney disorder. He was hospitalized for a few months and was on dialysis. The doctor recommended a stem cell treatment for the same. I checked online for treatments and found Viezece. I was impressed with the reviews I read of people who have tried it. I decided to go with them. They are a great team and have professional quality procedures. The treatment went very smoothly.

## •Michael Graham (Vermont, US)

My wife had kidney disease and the doctor recommended that we look into alternative treatments. I searched online and found this stem cell treatment clinic in India. It was less painful and she really appreciated not having to spend hours hooked to a machine. It is safe, affordable and has good results, also the doctors are very compassionate and always ready to assist. Thanks, Viezece for a good experience.

## •Gurleen Kaur (Pretoria, South Africa)

I was diagnosed with kidney failure when I saw this treatment. I decided to give it a try and after doing some research, I found the results were not only good but much different from the process of dialysis. I was able to regain the energy and I felt such for the first time in a long time. I was able to get back to my life and do the things I love to do. Thankyou Viezece for this great treatment.

**ABDUL RAHIM**  
Came from Bangladesh for CKD Treatment

**PATIENT STORY**

Mr. Abdul was suffering from acute uric acidemia since past 12 years. Aching joints, constrained movements and stiffness in the body were his usual life. For poor information, Mr. Abdul doesn't have any family history of joint diseases. His symptoms began with abrupt onset of the back pain, which went on to be severe with the entire body when, up to the range that he could barely walk or if he could, he began walking like an old man. Although the preliminary X-ray analysis showed nothing, might be because essentially it takes numerous years to exhibit changes related with the spine. Subsequently, he had to visit rheumatologists, who confirmed after almost 5 years that he is suffering from AS. His treatment routine involved diet plan, some oral medicines and constrained sports activities. However, as per Mr. Abdul's observation the medications were just anti-inflammatory and turned out to be palliatives. Furthermore, these medications welcomed other side effects such as inflammation, bloating, headaches, etc. As a result, with the evolution of time, the symptoms got worse with more tension and sore back and other medical side effects. Although Abdul was very reluctant to let this chronic disease take over him, and urgently wanted some new treatment or contemporary medicine, which will help him to regain the life again. With hundreds of research and comprehensive understanding of stem cells, he opted to be treated with stem cells under the supervision of Global Stem Cell Care's team.

Ever since, Mr. Abdul underwent treatment, he experienced fabulous improvement in his conditions. During follow-up and pain management program, he recognized that there is no longer any rigidity, the pain was pretty tolerable and he could ultimately get out of bed and also at times could go for some floor workouts. Mr. Abdul is very positive and is grateful to the team of the clinic for all the support and amenities.

**ARCHANA SINGH**  
Came from Madhya Pradesh for ILD & CKD Treatment

**HAPPY PATIENTS**

Tissue injury happening after ischemic, toxic or inflammatory insults results in cell demise and perhaps to organ failure. The regeneration procedure taking place thereafter might lead to the complete repair of the impaired tissue or, in partial/alternated remodeling, in tissue fibrosis and blemishing. This might depend on the intrinsic capability of diverse tissues to repair as well as on the entity and perseverance of the injury. In this situation, stem cell therapy can be observed as a promising choice in two diverse ways. The first is as a "support" mechanism, in which stem cells are used to promote complete tissue repair and avoid damaging fibrosis. The other is the "replace" option, in which stem cells segregate and substitute for impaired cells, providing an alternative to organ transplantation. This is of specific need in therapy for chronic organ failure.

info@viezece.com  
+91 96507 60803

**LAXMI DEVI**  
Came from Jharkhand for Diabetes & CKD Treatment

**HAPPY PATIENTS**

Stem cells are a naturally occurring component of the human body with the remarkable capacity to locate and regenerate damaged tissues. The complete development of the findings will take up to four months after stem cell therapy. During this time, the patient continues to notice new changes. There's still no chance of rejection or negative side effects. The entire procedure takes just a few hours and is extremely fast, painless, easy, and clean.

Patients with chronic renal disease who receive stem cell therapy are likely to have positive results, giving them new optimism for enhancing their quality of life and also leading to less frequent hemodialysis or preventing dialysis. Other things to expect after stem cell therapy for renal dysfunction are: Total CKD progression halting Damaged Nephrons Regeneration Improved volume of creatinine Improved filtration Normal dialysis is not needed Refined renal function Better hormone management Enhanced ion balance

# Improvement

It's frightening to envision a life without a clear central goal, but there's reason to be hopeful. Doctors are also searching at ways to improve patients with this condition, and they're researching experimental therapies that may one day be used as a therapy. For instance, stem cell development is currently ongoing, with the potential to lead to a cure in the future.

Before these groundbreaking therapies become a reality, it's important to speak with an experienced doctor who will guide you through current procedures for the type of macular degeneration you have already. We have physicians available to work with you, and our doctors will use cutting-edge procedures to keep your eyes as healthy as possible. Patients' effects have changed as a result of stem cell therapy provided by Stem Cell Treatment India.

## Our Promise

It's frightening to envision a life without a clear central goal, but there's reason to be hopeful. Doctors are also searching at ways to improve patients with this condition, and they're researching experimental therapies that may one day be used as a therapy. For instance, stem cell development is currently ongoing, with the potential to lead to a cure in the future.

Before these groundbreaking therapies become a reality, it's important to speak with an experienced doctor who will guide you through current procedures for the type of macular degeneration you have already. We have physicians available to work with you, and our doctors will use cutting-edge procedures to keep your eyes as healthy as possible. Patients' effects have changed as a result of stem cell therapy provided by Stem Cell Treatment India.

## Post Treatment Care

### Postoperative care

The stem cell therapy does not damagingly affect patients in any way. Generally, the patients are permitted to leave after few hours after the completion of the stem cell treatment. A 24-hour patient hotline number is there for any inquiries after their discharge. The concerned physicians or surgeons of the clinic also stay in contact with their corresponding patients through telephone or email. By doing this, they can get the precise feedback about their progress and also suggest further recovery if required. Say for example, in case of a diabetic patient, after hearing about the patient's present symptoms, the concerned doctor can recommend the needed dosage of insulin.

### Treatment disclaimer

It is an imperative fact to comprehend that stem cell treatment in every prospect has the ability to diminish symptoms of numerous diseases. It also has the aptitude of ceasing several degenerative procedures, but one should also know that this treatment may not work for all kinds of patients. Viezec does not have the right of forecasting or warranting the success of this treatment.

In harmony to the current condition of a patient, the medical team of Viezec might propose the stem cell transplantation or may even withdraw the treatment under abnormal situations. However, in any case, the approval of the patient is a must. Keeping the patient's current health condition and unforeseen health hazards in mind, the medical staff might propose an alternative stem cell transplantation process. In exceptional situations, they may entirely cancel the treatment.

## **Are there symptoms of renal failure?**

- Frequent trips to the restroom
- Loss of appetite
- Dry, itchy skin
- Swollen feet
- Muscle cramps

## **2.Are there tests that can detect kidney disease?**

A doctor may first detect the condition through routine blood and urine tests. There are three tests to screen for kidney disease: a blood pressure measurement, a spot check for protein or albumin in the urine (proteinuria), and a calculation of glomerular filtration rate (GFR) based on the serum creatinine measurement. Measuring the urea & nitrogen in the blood provides additional information.

## **3.How long does a transplanted kidney work?**

On an average, a kidney transplant lasts between 8 to 15 years. But some transplants last only a few weeks and some last for as long as 20 years. In general, kidneys from the living donors last longer than those from cadaveric (deceased) donors.

## **4.What causes kidney failure?**

There are several conditions that can lead to kidney disease, but the leading two causes are hypertension (high blood pressure) and diabetes.

## **5.What does it mean to be an ESRD patient?**

End-stage renal disease (ESRD) occurs when kidney damage is so severe that dialysis or a kidney transplant is needed to control the symptoms and prevent further complications and death. This is a case of total and permanent kidney failure. When the kidneys fail, the body retains fluids and harmful wastes build up poisoning the body.

## **6.What is dialysis?**

Dialysis is the procedure for artificially replacing many functions performed by normal kidneys. It is necessary to replace kidney function when kidneys are no longer able to keep people healthy and safe. There are two common types of dialysis: hemodialysis and peritoneal dialysis. When stem cell therapy for kidney disease fails dialysis comes to the rescue.

As a stem cell company at the cutting edge of Regenerative Medicine, Viezec is dedicated to developing technologies and protocols for safe and effective treatments utilising adult stem cells derived from the umbilical cord.

StemCellCareIndia offers a comprehensive range of stem cell solutions in India for the treatment of different kinds of diseases. Our main focus is helping people get back to good health through stem cell treatment. We have association with the leading hospitals, research institutions and medical colleges specialising in regenerative medicine to offer cost – effective healthcare.

Around the world, emerging technologies and advancements in stem cell therapies are driving major changes in healthcare. With the use of potent mesenchymal stem cells isolated from the tissue of umbilical cord, damaged cells are replaced by new cells. This makes the symptoms of the diseases disappear. We are passionate about the latest developments in stem cell therapies and strive to deliver safe and effective treatment options to patients' world over at the highest medical standards.

As the leading stem cell therapy company, StemCellCareIndia takes care of each and every section of the Medical Trip to New Delhi. We ensure our patients get the best healthcare service by bringing in place, the renowned multispecialty hospitals, latest stem cell treatments, economical accommodations and travel options for the patients.

## VISION

Our vision is to provide effective healthcare services to patients all over the world fast and hassle-free. For this, we work closely with some of the best medical centres and research institutions in providing stem cell therapeutic solutions to our patients. Our work is to redesign and deliver the best treatment possible for the safe and fast recovery of patients and make their journey towards 'good health' as stress-free as possible.

## MISSION

Our mission is to provide the international patients visiting in New Delhi, the satisfaction of best treatment for any kind of disease. The face of healthcare has changed over the years and so, have the healthcare costs. We have a professional team that takes care of every need of international patients, from appointment to accommodation. Through our network of internationally accredited hospitals and research clinics, we provide reliable and bespoke assistance. Seeing patients getting healthier and happier is what make us happy.

# ORGAN SPECIFIC

Tissue injury happening after ischemic, toxic or inflammatory insults results in cell demise and perhaps to organ failure. The regeneration procedure taking place thereafter might lead to the complete repair of the impaired tissue or, in partial/altered remodeling, in tissue fibrosis and blemishing. This might depend on the intrinsic capability of diverse tissues to repair as well as on the entity and perseverance of the injury. In this situation, stem cell therapy can be observed as a promising choice in two diverse ways. The first is as a “support” mechanism, in which stem cells are used to promote complete tissue repair and avoid damaging fibrosis. The other is the “replace” option, in which stem cells segregate and substitute for impaired cells, providing an alternative to organ transplantation. This is of specific need in therapy for chronic organ failure.

Multi potent marrow stromal cells are the most established kind of stem cells for organ repair and the most progressive in clinical development. The conceivable applications of multi potent marrow stromal cells in the repair of kidney, heart and brain were discoursed and also their potential negative effects were discussed. A whole view of the complex identity of these multi potent cells, identified as per vascular cells in diverse organs, is provided. They recommend a role for per vascular stem cells as originators of mesenchymal stem cells and contemplate their possible physiological role in tissue regeneration.

There is a common agreement that the mechanism of the beneficial effect of multi potent stromal cells in organ repair is owing to a “support” mechanism rather than to their differentiation. In this light, it was reviewed that the intriguing likelihood of using bio products of stem cells such as micro vesicles, in place of the cells to support renewal in impaired organs, such as the liver and kidney, and offer a novel, and perhaps easier, methodology to stem cell therapy.

# SUPPORTIVE THERAPIES

Viezec is unlike any other stem cell treatment provider in the world, the reason? Since its inception, we have been developing and enhancing our stem cell treatment protocols with the notion that stimulation via a number of supportive therapies is essential to augment stem cell regenerative response. Our treatment methodology permits our patient to maximize their improvements. Learn more about the diverse therapies provided in our treatment practices.

## ACUPUNCTURE

Acupuncture is a method in which practitioners stimulate particular points on the body – most often by inserting thin needles via the skin. It is one of the most effective practices used in old-style Chinese medicine. Acupuncture arouses nerve fibers to convey signals to the spinal cord and brain, stimulating the body's central nervous system. The spinal cord and brain then release hormones accountable for making us feel less pain while improving overall health. Acupuncture might also: upsurge blood circulation and body temperature, affect white blood cell activity (responsible for our immune function), decrease cholesterol and triglyceride levels and normalize blood sugar levels.

## EPIDURAL STIMULATION

Epidural stimulation has aided preceding patients to recoup some voluntary motor function. The technology comprises of a device implanted in the epidural space which constantly delivers electric signals to the spinal cord. These electric signals mimic the ones that are delivered by the brain to voluntarily control the body's movements. The epidural stimulation device is offered by Medtronic.

## AQUA THERAPY

Aquatic Physical Therapy is the practice of physical therapy in a specially designed water pool with a therapist. The exceptional properties of the aquatic environment augment interventions for patients with neurological or musculoskeletal conditions. Aquatic therapy embraces a widespread variety of techniques permitting patients to improve their balance, muscle strength and body mechanics. Aquatic therapy works to boost the rehabilitation process and support efficiency of stem cell treatment.

## HYPERBARIC OXYGEN THERAPY

Hyperbaric Oxygen Therapy (HBOT) is the medical use of oxygen at a level upper than atmospheric pressure. The equipment necessary comprises of pressure chamber, which might be of rigid or flexible construction, and a means of supplying 100% oxygen into the respiratory system. Published research shows that HBOT upsurges the lifetime of stem cells after inoculation and offers an oxygen-rich atmosphere for the body to function at optimal levels.

## NERVE GROWTH FACTOR (NGF)

Nerve growth factor (NGF) is a member of the neurotrophic factor (neurotrophin, NTFS) family, which can inhibit the death of nerve cells and has several features of typical neurotransmitter molecules. NGF plays an imperative role in the development and growth of nerve cells. NGF is synthesized and secreted by tissues (corneal epithelial, endothelial, and corneal stromal cells), and it can be up-taken by sympathetic or sensory nerve endings and then conveyed to be stored in neuronal cell bodies where it can encourage the growth and differentiation of nerve cells. NGF can exert neurotrophic effects on injured nerves and promote neurogenesis (the procedure of generating neurons from stem cells) that is closely related to the development and functional maintenance and darning of the central nervous system. It is also adept of encouraging the regeneration of injured neurons in the peripheral nervous system, improving the pathology of neurons and guarding the nerves against hypoxia (lack of oxygen)/ischemia (lack of blood supply).

## TRANSCRANIAL MAGNETIC STIMULATION

Research has shown that TMS can efficiently treat symptoms of depression, anxiety, neurological discomfort, stroke, spinal cord injuries, autism and more. This process is very simple and noninvasive. During the process, a magnetic field generator or “coil” is placed near the head of the individual getting the treatment. The coil produces small electrical currents in the area of the brain just beneath the coil via electromagnetic induction. This electrical field causes a change in the trans membrane current of the neuron which results in depolarization or hyper polarization of the neuron and the firing of an action potential.

## OCCUPATIONAL THERAPY

Occupational therapy interventions concentrate on adapting the environment, revising the task and teaching the skill, so as to upsurge participation in and performance of everyday activities, predominantly those that are meaningful to the patient with physical, mental, or cognitive maladies. Our occupational therapists also focus much of their work on detecting and eradicating environmental barriers to independence and participation in day-to-day activities, akin to everyday life.

## PHYSIOTHERAPY

Physical therapy or physiotherapy (often truncated to PT) is a physical medicine and rehabilitation specialty that, by using mechanical force and actions, remediates damages and promotes flexibility, function and quality of life via examination, diagnosis, prognosis and physical intervention. We combine our PT with stem cells for supreme physical rehabilitation improvements.

## NUTRITION THERAPY

Medical nutrition therapy (MNT) is a therapeutic methodology to treat medical conditions and their related symptoms by the usage of a specifically tailored diet formulated and monitored by a specialist. The therapy targets at fixing nutritional inefficiencies and physiological imbalances so as to provide the best environment possible for the stem cells to develop appropriately as well as improving patient's general health.
