# Rheumatoid Arthritis

# Overview

Rheumatoid Arthritis is an autoimmune malady which is instigated by a miscarrying immune system (autoimmunity) attacking the body's own healthy tissues in the joints, which may cause swelling, pain, rigidity, and also sometimes cause loss of function of the joints. It is a chronic ailment that results in long-standing joint impairment, loss of some functions which in turn may lead to disability. Individuals with this disease have shown signs of antibodies in their blood which targets their own body tissues, leading in inflammation. In some folks, the disease is unremittingly active and gets worse with passing time, hence it is advised to timely opt for Rheumatoid Arthritis Stem Cell Treatment. In the case of rheumatoid arthritis, numerous organs in the body may be affected. Early diagnosis and speedy subsequent treatment of symptoms might avoid joint destruction, organ damage, and infirmity. Stem cell therapy rheumatoid Arthritis in India is a procedure which provides befitting cure for the ailment.

Rheumatoid arthritis is an inflammatory condition that affects the joints and other parts of the body, resulting in chronic joint inflammation. Neglect over time can result in deformed and painful joints that are severely malfunctioning. Other organs, such as the heart, may be damaged by the disease over time, in addition to the joints. All of the following signs are closely related:

- 1.Rheumatoid arthritis that is resistant to therapy,
- 2.The use of anti-inflammatory drugs, such as steroids, is unsuccessful.
- 3.Substantial degradation of joint flexibility
- 4.Musculoskeletal System Disorders in the Tropics
- 5.Major immunological and hematopoietic defects

## Symptoms

Joints pain and inflammation

Rigidity in the joints in the morning and after sitting repeatedly

Over time, joints might lose their range of motion and might become distorted.

Chest pain when taking a breath (pleurisy)

Dry eyes and mouth (Sjogren syndrome)

Eye burning, itching and discharge

Numbness, tingling or burning in the hands and feet

Sleep problems

Lethargy

## Cause

- Smoking
- Diet
- Age - 40 and 60.
- Sex - two to three times more common among women than men
- Genetics
- Weight

## Diagnosis

- Blood tests
- Rheumatoid Factor test
- Anti-Cyclic Citrullinated Peptide Test
- Joint scans

## Adverse Reaction

We comprehend that patients might have apprehensions about adverse reactions to the treatment. Possible side-effects of stem cell therapy may differ from individual to individual; any complications depend upon the type of processes you are undergoing.

Side-effects experienced by our patients are consistent with predictable reactions for routine IV and LP injections. The most common reactions to the treatment are fever, headache, diarrhea, leg pain, vomiting and allergic reactions. Less than four percent of patients experience any of these signs.

### **The most common reactions to the stem cell treatment are:**

Fever

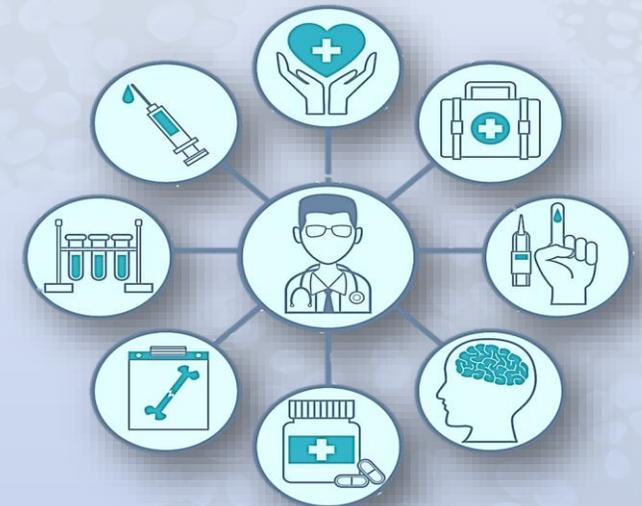

Headache

Leg Pain

Diarrhea

Vomiting

Allergic reactions

**Viezeq**  
STEM CELL INSTITUTE

# Treatment Procedure

The ViezeC India offers a very safe and non-invasive treatment protocol and procedure. The patients can travel the next day. The following is the day-wise schedule for the patients.

## Day 1-

- Pick up from the Airport to the Hospital
- Interaction between Dr and Patient, to clear all their doubts at that time
- Admission procedure
- Clinical examination & Lab test will be done prescribed by the doctor

## Day 2-

- Stem cell Procedure
- Supportive therapies
- Physiotherapy

## Day 3-

- Supportive Therapy
- Physiotherapy
- Discharging formalities
- Drop back to the Airport

## International Patient Facilities

- Quote/treatment plan
- Complimentary airport pick up
- Scheduling of all medical appointments
- Cost estimates for anticipated treatment

- Visa assistance letter
- Dedicated guest relation officers
- Coordination of the admissions process

# Treatment

The majority of the cases of AMD involve the slow-developing type of AMD, called dry AMD. Currently, as of 2020, there are no treatment options available for dry AMD, but some promising new therapies are in it. The slow-developing form of AMD, called dry AMD, constitutes the majority of AMD cases. There are no treatment options currently available for dry AMD as of 2022, but some exciting new treatments are in the pipeline.

For all aspects of medicine today, including multiple cases of cancer, as well as for dry AMD, stem cell treatment is gaining momentum. The aim of stem cell treatment for AMD is to be able to replace retinal cells that have been damaged or killed by symptoms with new stem cells.

Stem cells are also inserted, through IV infusion, into the blood supply of the body. But, experts are focusing on how the stem cells can be transplanted directly into the eyes. One strategy involves placing the stem cells into a fluid suspension that can be injected under the retina

We use the unique technology of Mesenchymal stem cells extracted from Wharton's jelly (WJ) for treating MS. WJ-MSCs offer remunerative and budget friendly favorable treatment for tissue engineering purpose. An optic nerve stem cell regeneration aids this and more. They might help in the three peculiarly prominent ways – prevent damage, repair damage and develop new medicines.

The treatment will take place in multiple steps comprising of the following.

•**Qualification for the treatment:** Our experts will assess all your past medical history and symptoms to examine and correctly judge the severity of your condition. A series of tests will be performed to gain a knowledge of the stage of disease. As per the test results, our experts will counsel the patient for further process of the procedure.

•**Source Extraction:** With guidance and approval from the physician, the source of extraction will be decided. In general, WJ-MSCs are the most potent allogenic sources available. Stem cells from a healthy person (the donor) are transferred to the patient's body. A bone marrow donor is considered for allogenic stem cell transplantation. A scraping from the inside of the patient and his or her sibling's cheek is tested to determine tissue type. An expert will examine to identify Human Leukocyte Antigens (HLAs). If the HLA on the donor cells are identical or similar, the transplant is more likely to be successful. Stem cell for optic nerve atrophy is promoted to aid patients suffering from similar kind of ailment.

•**Laboratory Processing:** The extracted samples will be sent to government approved cGMP laboratory for processing. The sample manipulation will take place in a state-of-the-art facility in compliance with the ISO and GMP standards and using the latest technologies. The client will receive a third party certificate from an internationally accredited lab for quality purpose. An optic nerve stem cell therapy provides just that and more.

•**Stem Cell Implantation:** Once the stem cells are ready to be implanted, the doctor will identify the most potent method of infusion based on the patient's physical and mental well-being. The only limitation of the allogenic stem cell treatment is that this procedure carries the risk of developing Graft vs. host disease (GVHD), wherein the patient's body rejects the donor stem cells. Human leukocyte antigens (HLA) can help minimize the risk of any side effects. In this procedure, the HLA of the patient and the donor are primarily matched as closely as possible.

**Stem cell treatment Aftercare:** The patients will be asked to visit the doctors for evaluation. You will be provided counselling for speedy recovery and also kept on check to ensure that no side effects affect the human body.

# Patient Testimonials

## •Chase Galvin (Bronx, New York)

I have tried stem cell therapy to treat my arthritis and it worked. I have been able to get rid of my pain and inflammation symptoms. I am much more mobile and my life benefits from the stem cell treatment of Viezecec. The procedure was simple and has been a great success. I am able to do things that I couldn't do before. I highly recommend this centre to anyone with arthritis, they are the best ones to assist you.

## •Amitee Rossignol (Suscévaz, Switzerland)

•My husband was suffering from Rheumatoid arthritis and I started to look for stem cell treatment in India. I read about Viezecec and tried their treatment. He is feeling much better, his pain is cut and his mobility is restored. These results have been faster than we had expected, the staff there was amazing, and also we didn't have any problem with our stay in India due to their assistance. Thanks to them and I'll recommend them to people looking for a good stem cell clinic.

## •Lakshya Mehra (Kolkata, India)

I have suffered from arthritis for over a decade. I have tried all sorts of treatments, from traditional medicine to holistic treatments like stem cell therapy. I am happy to say that stem cell therapy has been the best treatment for me so far. I have been able to manage my pain levels with it and I feel like my joints are less swollen. I highly recommend stem cell treatment for arthritis patients.

**PUSHKAR SHAMSHER**  
came Nepal for Avascular Necrosis of Femoral Head Bilaterally Treatment

It has been a long time since I had an issue with my kidneys. Pain and difficulty urinating in the region. An injury to my hip bone has occurred as a result of my long-term use of medication. For the last two years, my hip has been aching. I went to an orthopaedic doctor and was given injections for an operation. My sister told me about stem cell therapy, so I came here for the operation and was pleased with the results.

**KHAJA MOHAN**  
Came from Telengana for Spinal Cord Injury Treatment

**PATIENT STORY**

Hi, I am Agaldiviti and my father is Khaja Mohan from Telengana. My father has been suffering from spinal cord injury since some years. We went to a lot of places for his treatment but all our efforts went in vain. He was not able to get healed as no doctor gave us a correct and suitable recommendation for his treatment. After trying a lot, we resorted to read about stem cell therapy via internet. After a lot of exploration we found out Viezecec. We took him to Viezecec to get stem cell treatment. After undergoing the treatment, my father is feeling a lot more fine and better. We are very happy and contented with the treatment that has been given to us. The staff was very cooperative and we would recommend the name of Viezecec to all our near and dear ones. Thanks team a lot for curing my dad.

**MOHAMMED USAMA KHAN**  
Came from Hyderabad for Spinal Cord Injury Treatment

I found about Stem Cell Care India online, at the time I was struggling with immobility, I feel from a height of 70-75 feet in 2018 and have been immobile ever since. I came across stem cell treatment in 2020 and have witnessed visible improvements. The team took care of not only stem cell treatment but also the post-procedure, like, physiotherapy, electrical simulation, hydrotherapy. This is the second sitting for stem cell transplant. The overall service quality is great, 24/7 nurse attendants present on duty, the quality of food is good, they take care of each patient well. I totally would recommend them to anyone searching for some lucrative treatment option.

**HAPPY PATIENT**

# Improvement

It's frightening to envision a life without a clear central goal, but there's reason to be hopeful. Doctors are also searching at ways to improve patients with this condition, and they're researching experimental therapies that may one day be used as a therapy. For instance, stem cell development is currently ongoing, with the potential to lead to a cure in the future.

Before these groundbreaking therapies become a reality, it's important to speak with an experienced doctor who will guide you through current procedures for the type of macular degeneration you have already. We have physicians available to work with you, and our doctors will use cutting-edge procedures to keep your eyes as healthy as possible. Patients' effects have changed as a result of stem cell therapy provided by Stem Cell Treatment India.

## Our Promise

It's frightening to envision a life without a clear central goal, but there's reason to be hopeful. Doctors are also searching at ways to improve patients with this condition, and they're researching experimental therapies that may one day be used as a therapy. For instance, stem cell development is currently ongoing, with the potential to lead to a cure in the future.

Before these groundbreaking therapies become a reality, it's important to speak with an experienced doctor who will guide you through current procedures for the type of macular degeneration you have already. We have physicians available to work with you, and our doctors will use cutting-edge procedures to keep your eyes as healthy as possible. Patients' effects have changed as a result of stem cell therapy provided by Stem Cell Treatment India.

## Post Treatment Care

### Postoperative care

The stem cell therapy does not damagingly affect patients in any way. Generally, the patients are permitted to leave after few hours after the completion of the stem cell treatment. A 24-hour patient hotline number is there for any inquiries after their discharge. The concerned physicians or surgeons of the clinic also stay in contact with their corresponding patients through telephone or email. By doing this, they can get the precise feedback about their progress and also suggest further recovery if required. Say for example, in case of a diabetic patient, after hearing about the patient's present symptoms, the concerned doctor can recommend the needed dosage of insulin.

### Treatment disclaimer

It is an imperative fact to comprehend that stem cell treatment in every prospect has the ability to diminish symptoms of numerous diseases. It also has the aptitude of ceasing several degenerative procedures, but one should also know that this treatment may not work for all kinds of patients. Viezec does not have the right of forecasting or warranting the success of this treatment.

In harmony to the current condition of a patient, the medical team of Viezec might propose the stem cell transplantation or may even withdraw the treatment under abnormal situations. However, in any case, the approval of the patient is a must. Keeping the patient's current health condition and unforeseen health hazards in mind, the medical staff might propose an alternative stem cell transplantation process. In exceptional situations, they may entirely cancel the treatment.

### **Is there a way to get rid of RA?**

We now know a lot about what induces RA and how to approach it. Joint damage can now be prevented, considering the fact that we are currently powerless to repair it. This allows for the early introduction of disease-modifying antirheumatic medications (DMARDs). These are necessary to obtain rapid control of the disease in order to avoid joint erosion and long-term limitations of activity.

### **Rheumatoid arthritis is caused by a combination of factors.**

Rheumatoid Arthritis has no clear cause, although it is commonly believed to be caused by environmental causes. Individuals who have an inherited predisposition to the condition. Despite the fact that certain patients remember a viral infection prior to the onset of RA, the majority do not. To date, no single infectious agent has been found. (Some antibiotics can help RA a little, but their benefits are more likely to come from their anti-inflammatory properties than from their ability to destroy bacteria.) Cigarette smoking and oral inflammation (gingivitis) have been linked to the early stages of rheumatoid arthritis.

Genetic conditions play a large role in the production of RA. Genetic variables signify the presence of genes that place a person at risk for RA and the activation of those genes (meaning expressed in cells). However, it suggests that a genetically predisposed individual's contact with an environmental agent is what causes the RA characteristic of self-perpetuating inflammation. While the importance of biology is clear, it is still important to remember that health conditions have an impact on everything.

### **Why is Rheumatoid Arthritis referred to as an autoimmune disease?**

The immune system is involved in the production of joint inflammation and injury, fatigue, and the sense of having a long-term viral infection. Body-protecting cells and antibodies make up the immune system. This help in the fight against invading infectious agents in healthy people. Anything goes wrong in RA, however, and the immune response tends to be focused toward the person's tissues. As a consequence, it's recognised as an autoimmune condition.

### **How painful is the process for implanting stem cells?**

It is somewhat as painful as a typical shot in a doctor's clinic.

### **When can I expect to feel better and see the results?**

The results should become obvious over 1-3 months, but at times can take as long as 6-9 months.

### **When can I return to normal activity?**

This depends on the kind of procedure. However, all of our techniques are designed to promote as much early activity as possible.

As a stem cell company at the cutting edge of Regenerative Medicine, ViezeC is dedicated to developing technologies and protocols for safe and effective treatments utilising adult stem cells derived from the umbilical cord.

StemCellCareIndia offers a comprehensive range of stem cell solutions in India for the treatment of different kinds of diseases. Our main focus is helping people get back to good health through stem cell treatment. We have association with the leading hospitals, research institutions and medical colleges specialising in regenerative medicine to offer cost – effective healthcare.

Around the world, emerging technologies and advancements in stem cell therapies are driving major changes in healthcare. With the use of potent mesenchymal stem cells isolated from the tissue of umbilical cord, damaged cells are replaced by new cells. This makes the symptoms of the diseases disappear. We are passionate about the latest developments in stem cell therapies and strive to deliver safe and effective treatment options to patients' world over at the highest medical standards.

As the leading stem cell therapy company, StemCellCareIndia takes care of each and every section of the Medical Trip to New Delhi. We ensure our patients get the best healthcare service by bringing in place, the renowned multispecialty hospitals, latest stem cell treatments, economical accommodations and travel options for the patients.

## VISION

Our vision is to provide effective healthcare services to patients all over the world fast and hassle-free. For this, we work closely with some of the best medical centres and research institutions in providing stem cell therapeutic solutions to our patients. Our work is to redesign and deliver the best treatment possible for the safe and fast recovery of patients and make their journey towards 'good health' as stress-free as possible.

## MISSION

Our mission is to provide the international patients visiting in New Delhi, the satisfaction of best treatment for any kind of disease. The face of healthcare has changed over the years and so, have the healthcare costs. We have a professional team that takes care of every need of international patients, from appointment to accommodation. Through our network of internationally accredited hospitals and research clinics, we provide reliable and bespoke assistance. Seeing patients getting healthier and happier is what make us happy.

# ORTHOPEDIC

Orthopedic problems are disorders linking to the musculoskeletal system. They might involve the bones, muscles, cartilages, connective tissues or joints. Orthopedic problems might be pathological like fracture, dislocation and tumors; degenerative like osteoarthritis, osteoporosis or inflammatory autoimmune disorders like rheumatoid arthritis, gout, systemic lupus erythematosus (SLE). Long term joint pain, muscle or tendon pain can be exasperating. These pains lead to some of the most common musculoskeletal complications and they can be because of strains, sprains and overuse. The pain is most common on shoulders, back, knees, hip and ankles. It might be a worthy idea to seek medical support when the pain takes a bit longer to subside so you can decrease the chances of it developing into a more serious issue.

Orthopedic stem cell treatment deals with anything that is concerned with muscles, ligaments and joints via stem cells. Any disorders that affect these three portions of the body involve an orthopedic surgeon. Some of these ailments include injuries and sicknesses of the knee, dislocated shoulders, torn cartilages or foot pain.

# SUPPORTIVE THERAPIES

ViezeC is unlike any other stem cell treatment provider in the world, the reason? Since its inception, we have been developing and enhancing our stem cell treatment protocols with the notion that stimulation via a number of supportive therapies is essential to augment stem cell regenerative response. Our treatment methodology permits our patient to maximize their improvements. Learn more about the diverse therapies provided in our treatment practices.

## ACUPUNCTURE

Acupuncture is a method in which practitioners stimulate particular points on the body – most often by inserting thin needles via the skin. It is one of the most effective practices used in old-style Chinese medicine. Acupuncture arouses nerve fibers to convey signals to the spinal cord and brain, stimulating the body's central nervous system. The spinal cord and brain then release hormones accountable for making us feel less pain while improving overall health. Acupuncture might also: upsurge blood circulation and body temperature, affect white blood cell activity (responsible for our immune function), decrease cholesterol and triglyceride levels and normalize blood sugar levels.

## EPIDURAL STIMULATION

Epidural stimulation has aided preceding patients to recoup some voluntary motor function. The technology comprises of a device implanted in the epidural space which constantly delivers electric signals to the spinal cord. These electric signals mimic the ones that are delivered by the brain to voluntarily control the body's movements. The epidural stimulation device is offered by Medtronic.

## AQUA THERAPY

Aquatic Physical Therapy is the practice of physical therapy in a specially designed water pool with a therapist. The exceptional properties of the aquatic environment augment interventions for patients with neurological or musculoskeletal conditions. Aquatic therapy embraces a widespread variety of techniques permitting patients to improve their balance, muscle strength and body mechanics. Aquatic therapy works to boost the rehabilitation process and support efficiency of stem cell treatment.

## HYPERBARIC OXYGEN THERAPY

Hyperbaric Oxygen Therapy (HBOT) is the medical use of oxygen at a level upper than atmospheric pressure. The equipment necessary comprises of pressure chamber, which might be of rigid or flexible construction, and a means of supplying 100% oxygen into the respiratory system. Published research shows that HBOT upsurges the lifetime of stem cells after inoculation and offers an oxygen-rich atmosphere for the body to function at optimal levels.

## NERVE GROWTH FACTOR (NGF)

Nerve growth factor (NGF) is a member of the neurotrophic factor (neurotrophin, NTFS) family, which can inhibit the death of nerve cells and has several features of typical neurotransmitter molecules. NGF plays an imperative role in the development and growth of nerve cells. NGF is synthesized and secreted by tissues (corneal epithelial, endothelial, and corneal stromal cells), and it can be up-taken by sympathetic or sensory nerve endings and then conveyed to be stored in neuronal cell bodies where it can encourage the growth and differentiation of nerve cells. NGF can exert neurotrophic effects on injured nerves and promote neurogenesis (the procedure of generating neurons from stem cells) that is closely related to the development and functional maintenance and darning of the central nervous system. It is also adept of encouraging the regeneration of injured neurons in the peripheral nervous system, improving the pathology of neurons and guarding the nerves against hypoxia (lack of oxygen)/ischemia (lack of blood supply).

## TRANSCRANIAL MAGNETIC STIMULATION

Research has shown that TMS can efficiently treat symptoms of depression, anxiety, neurological discomfort, stroke, spinal cord injuries, autism and more. This process is very simple and noninvasive. During the process, a magnetic field generator or “coil” is placed near the head of the individual getting the treatment. The coil produces small electrical currents in the area of the brain just beneath the coil via electromagnetic induction. This electrical field causes a change in the trans membrane current of the neuron which results in depolarization or hyper polarization of the neuron and the firing of an action potential.

## OCCUPATIONAL THERAPY

Occupational therapy interventions concentrate on adapting the environment, revising the task and teaching the skill, so as to upsurge participation in and performance of everyday activities, predominantly those that are meaningful to the patient with physical, mental, or cognitive maladies. Our occupational therapists also focus much of their work on detecting and eradicating environmental barriers to independence and participation in day-to-day activities, akin to everyday life.

## PHYSIOTHERAPY

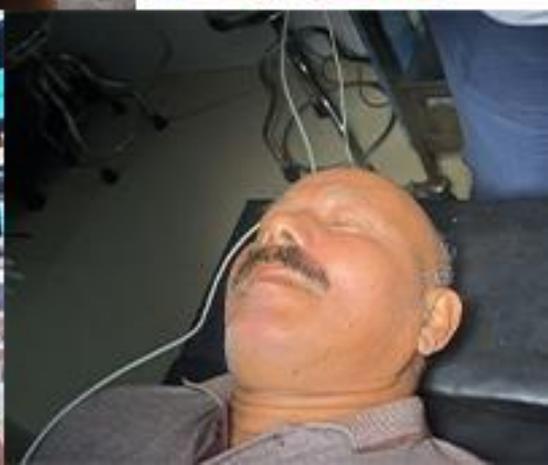

Physical therapy or physiotherapy (often truncated to PT) is a physical medicine and rehabilitation specialty that, by using mechanical force and actions, remediates damages and promotes flexibility, function and quality of life via examination, diagnosis, prognosis and physical intervention. We combine our PT with stem cells for supreme physical rehabilitation improvements.

## NUTRITION THERAPY

Medical nutrition therapy (MNT) is a therapeutic methodology to treat medical conditions and their related symptoms by the usage of a specifically tailored diet formulated and monitored by a specialist. The therapy targets at fixing nutritional inefficiencies and physiological imbalances so as to provide the best environment possible for the stem cells to develop appropriately as well as improving patient's general health.
